PREVALENCE OF DIABETES

Data from Danaei G et al, on behalf of the Global Burden of Metabolic Risk Factors of Chronic Diseases Collaborating Group (Blood Glucose). National, regional, and global trends in fasting plasma glucose and diabetes prevalence since 1980: systematic analysis of health examination surveys and epidemiological studies with 370 country-years and 2·7 million participants. *Lancet* 2011; published online June 25. DOI:10.1016/S0140-6736(11)60679-X

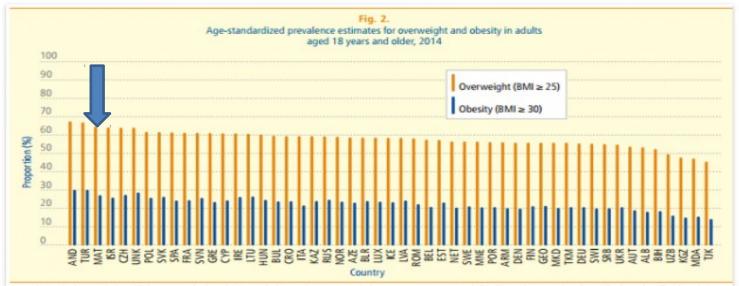

Prevalence of Diabetes in Malta

OBESITY IN MALTA

illurouay, ocpielliber 24, 2010, 01.00

Malta has highest obesity rate in the EU

Notes: BMI = body mass index. WHO uses standard methods to calculate estimates to maximize cross-country comparability. These data may therefore differ from the official statistics of Member States. ALB: Abania; AND: Andorra; ARM: Armenia; AUT: Austria; AZE: Azerbaijan; BIH: Bosnia and Herzegovina; BLR: Belarus; BEL: Belgium; BUL: Bulgaria; CRO: Croatia; CYP: Cyprus; CZH: Czech Republic; DEN: Denmark; DEU: Germany; EST: Estonia; FIN: Finland; FRA: France; GEO: Georgia; GRE: Greece; HUN: Hungary; ICE: Iceland; ISR: Israel; ITA: Italy, KAZ: Kazakhstan; KGZ: Kyrgyzstan; LTU: Lithuania; LUX: Luxvembourg; LVA: Latvia; MAT: Maha: MDA: Republic of Moldova; MKD: the former Yugoslav Republic of Macedonia; MNE: Montenegro; NET: Netherlands; NOR: Norway; POL: Poland; POR: Portugal; ROM: Romania; RUS: Russian Federation; SPA: Spain; SRB: Serbia; SVK: Slovakia; SVN: Slovenia; SWE: Sweden; SWI: Switzerland; TIK: Tajikistan; TKM: Turkmenistan; TUR: Turkmy; UKR: Ukraine; UNK: United Kingdom; UZB: Uzbekistan.

Malta leads the EU in having the highest overweight and obesity rates, according to a new World Health Organisation report.

DIABETES DATABASE IN MALTA

The System can be used as:

- A Complete day to day Patient Management System
 - Electronic health record.
- A Source of data for Reports and Research on Diabetes
- A basis for a National Diabetes Registry
- Possible linkage with other datasets (eg free medication, mortality)

The database has entries for:

- Basic Patient demographic data (age, sex, address)
- Height, Weight & Waist Circumference
- Diabetes (type, year of diagnosis) and Medical History,
- Vascular risk factors (blood pressure, dyslipidaemia, smoking status)
- Dietary history and advice and Education
- Medications (past & present)
- Physical examination
- Glycaemic control, i.e. HbA1c results
- Complications

- Uses unique patient identifier
- National but incomplete
- Does not cover children

Authorized users can automatically generate reports for analysis by the BIRO system; it can also generate User Audit and Patients as per Consultant Reports

➤ Dissemination through meetings/papers

Used for audit/research

The database is in place at:

- The main diabetes clinic at Mater Dei Hospital
- At seven peripheral diabetes clinics.
- All doctors working at the diabetes clinics can use the system but data entry is voluntary.
- As of December 2016 there were 26737 patients (63%) registered on the database and 129339 patient visits recorded.
- Entry is still optional
- There are plans to link this with other electronic databases as laboratory & imaging results, electronic discharge letters but this has not yet been achieved.

- Recently it has been changed to an internetbased system
- Captive population

Future directions

- To make use of the system mandatory
- Improve IT system in the national health system
- Enable cross-talk with other local electronic databases

Conclusions

- A robust system with considerable data
- Is being used as an electronic database
- Has great potential in audit & research
